Name 2 : Omar

### Defect Description

Save(File drop down) acts like save as button and pressing ctrl+s still works like save as and not save to  
Save button working as save as for the current and already saved file and then a pop up appears  
Paste button is named as copy button and 2 buttons with name copy appearing  
Ctrl + v pastes the copied or cut text twice( doubled)  
Bold,Italicize , Underline and strike thorough buttons undo each other,e.g. Bold removes italics and Italics  
Underlined/Bold/Italicized/striking through text Cannot be Centered aligned  
While aligning 2 or 3 lines in the center it deselects all lines and only moves the lowest line while left/right  
Upper Case button works fine except that it left align the text when toggled  
Lower case button works fine except that it left align the text when toggled  
Center Align Button works as an upper case button as well as center align  
After zooming in 9 times the text editor displays error  
When zooming out on the 10th click the editor closes(crashes/shutdown) or after the min zoom size  
Exit Button in the file drop down doesn't works  
Undo button from the Edit drop down takes me to the initial step instead of previous one  
Redo button from the Edit drop down takes me to the last step instead of the one right after it  
Paste option in the edit drop down double/displays twice the cutted or copied text  
Select option in the edit drop down doesn't select the first 4 digits of the complete text  
Two buttons named as customize  
First Customize Button opens and when I change a color and press apply it changes the color of the edit  
Extra Customize button doesn't works  
Find Option in the search drop down selects the searched value and cannot be deselected

**Mobile Number:-----**

I opened search drop down, entered some text to search and pressed ctrl+f

[illegible]

Completion Time:02:11 & 05 : 00

**Brief Background: Junior QA Software Tester**

**Brief Background:**

Expected Results
------------------

Ctrl+S should save the text into current file and separate save as option should be present in File Drop d

Save button should save data to current file & separate save as button should be available

Paste icon should be named paste button not copy button

Ctrl+v should paste the text once and exactly as the one copied or cut

***Bolded, Italicized, Underlined and as well as striked through text***

Underlined/bolded/striked through/Italicized should be easily center aligned

All these align buttons aligned the text without deselecting anything

Upper case button when toggled makes the text upper case

Lower case button when toggled makes the text lower case

Lower cased text when center aligned should just align them to the center

Give a warning to the user that this is the max zoom size or display size somewhere on the editor

User is given a prompt that the minimum size is reached

The application should close

Undo button takes me to the previous step

Redo button takes me to the next step

Paste the exact copied text

Selects the whole text on the editor

One Customize button

Changes color of the selected text
------------------------------------

Maybe this was for costumizing the editor?

Locates the value in the whole text
-------------------------------------

[illegible]

## Actual Results

Save(File dropdown) acts like save as and ctrl +s does the same

Save button acts like save as button and when tab is closed a pop up appears

Paste icon is named as copy button while having paste function in it

Ctrl+v pastes the copied text as doubled or twice

Each button removes the other button's functions

Underlined/bolded/striked through/Italicized cannot be center aligned

Center Align Deselects the selected text while right and left align work fine

Upper case button when toggled makes the text upper case but also left alligns

Lower case button when toggled makes the text lower case but also left alligns

Center Align makes the lower case text upper case as well as center aligns it

After 9th zoom in it gives a prompt with error displayed

The app crashes/shutdown/closes instead of giving a prompt that min zoom size is reached

There is no result of pressing exit like if it was set as null

Takes the user to the initial step

Takes me to the most last step or the ending step

Displays text double/twice

Doesn't select the first 4 digis of the whole editor

## Two customize buttons

The color of the editor changed and not the color of the text

This customize is set to null

Instead of locating it actually selects only one value and even doesn't located the other one

[illegible]
