Suggestion

User should go to recovery form instead of the page just refreshing
User should be informed to enter the email not his CNIC

First Name entering column should be available
Warning that the user can only enter digits in the zip code
User shouldn't be able to continue without filling the form
Warning that the user can only enter alphabets in last name

Warning that the user can only enter alphabets in first name
Warning that the user can only enter Digits in Phone No.
Passwords should be hidden as in case of spying password is not visible
User should be registered and a link sent to his email as a verification email
----
User should be redirected to the first step of the registration
There should be a colum for the user to enter his CNIC Number as webapp is related to insurance
